New multicentre studies have been recently selected by the European Society of Anesthesthesiology Research Committee and will start in the coming months as part of the ESA Clinical Trial Network (CTN).

CTN studies details can be found in the attachments and on the ESA website: http://www.euroanaesthesia.org/

- OBTAIN: Observational study describing the occurrence of bleeding and thrombosis during Antiplatelet therapy.
- ETPOS: Observational study to evaluate standard of transfusion care.
- LAS VEGAS: Observational study: Ventilatory management during General Anesthesia.

So far few or no institution from your country has registered to be a contributing research centre for these trials. Therefore, we would like to ask you if you would be willing to promote the selected studies in your country.

To promote these CTN studies we ask for your kind support and hope that you can help us by disseminating the attached abstracts within your country and among your colleagues. If you identify and recruit local participating centers in your country please ask them to return the call for centre form attached to research@esahq.org to confirm their hospital interest and contact details.

Should you have any additional questions regarding these CTN studies, please contact Brigitte Leva and Sandrine Damster at research@esahq.org
